# **Chapter 1**

# **Base Architecture for the Arcade Project**

#### 1.1 Interfaces

Since the main goal of the project is to have multiple different libs used through the same interface, there is 2 of them:

- ILib
- IGame

#### 1.2 Build

```
To build the project:
```

```
/B-OOP-400> mkdir ./build/ && cd ./build/
/B-OOP-400/build> cmake .. -G "Unix Makefiles" -DCMAKE_BUILD_TYPE=Release
[...]
/B-OOP-400/build> cmake --build .
[...]
/B-OOP-400/build> cd ..
/B-OOP-400> ls ./arcade ./lib/
./arcade
./lib/:
arcade_ncurses.so
arcade_sfml.so
arcade_snake.so
arcade_nibbler.so
```

Then you'll have a makefile build. But not an Epitech one. Use make clean instead of the make fclean.

You should watch this video to understand cmake: CMake

By Dlore made up of:

- Alexandre Franquet | Miouzora
- Quentin Brejoin | Queng
- Guylain Thomas | Jibea

In collaboration with C11H17NO3 made up of:

# **Hierarchical Index**

# 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

ade::Core	. ??
:exception	
Arcade::LoaderException	??
ade::IGame	. ??
Arcade::AGame	??
ade::ILib	. ??
Arcade::ALib	??
ade::IObject	. ??
Arcade::AObject	??
ade::LibLoader< LibInterface >	. ??
ade::Text	. ??

4 Hierarchical Index

# **Chapter 3**

# **Class Index**

# 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Arcade::AGame
Abstract class for the game
Arcade::ALib
Abstract class for the graphical library
Arcade::AObject
Abstract class for every entities in games
Arcade::Core
Arcade::IGame
Interface for one game library
Arcade::ILib
Interface for the graphical library
Arcade::IObject
Interface for the object
Arcade::LibLoader< LibInterface >
Arcade::LoaderException
The class LoaderException is the exception thrown when the library cannot be loaded ??
Arcade::Text
The class Text is the generic way to handle text??

6 Class Index

# **Chapter 4**

# File Index

# 4.1 File List

Here is a list of all documented files with brief descriptions:

core/Core.hpp																		 . ??
core/ErrorManagement.hpp																		 ??
core/LibLoader.hpp																		??
core/src/Game/AGame.hpp																		??
core/src/Game/IGame.hpp																		??
core/src/Lib/ALib.hpp																		??
core/src/Lib/ILib.hpp																		 ??
core/src/Lib/Types.hpp																		??
core/src/Object/AObjects.hpp																		 ??
core/src/Object/IObject.hpp																		 ??
core/src/Text/Text.hpp																		 ??

# **Class Documentation**

#### 5.1 Arcade::AGame Class Reference

Abstract class for the game.

#include <AGame.hpp>

Inheritance diagram for Arcade::AGame:

### **Public Member Functions**

- Arcade::gameState getState (void) const final override Get the game state.
- ssize\_t getScore (void) const final override

Get the game score.

• ssize\_t getHighScore (void) const final override

Get the game high score.

• std::string getGameName (void) const final override

Get the game name.

#### **Protected Attributes**

• std::string \_name

The name of the game.

• Arcade::gameState \_state

The actual state of the game.

• ssize\_t \_score

The actual score of the game.

ssize\_t \_highScore

The high score of the game.

# 5.1.1 Detailed Description

Abstract class for the game.

#### 5.1.2 Member Function Documentation

#### 5.1.2.1 getGameName()

Get the game name.

This function will return the name of the game.

Returns

The name of the game.

```
Implements Arcade::IGame.
24 {return _name;};
```

#### 5.1.2.2 getHighScore()

Get the game high score.

This function will return the current high score of the game.

Returns

The current high score of the game.

```
Implements Arcade::IGame.
23 {return _highScore;};
```

#### 5.1.2.3 getScore()

Get the game score.

This function will return the current score of the game.

Returns

The current score of the game.

```
Implements Arcade::IGame.
22 {return _score;};
```

#### 5.1.2.4 getState()

Get the game state.

This function will return the current state of the game.

Returns

The current state of the game.

```
Implements Arcade::IGame.
21 {return _state;};
```

The documentation for this class was generated from the following file:

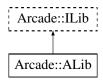

• core/src/Game/AGame.hpp

## 5.2 Arcade::ALib Class Reference

Abstract class for the graphical library.

```
#include <ALib.hpp>
```

Inheritance diagram for Arcade::ALib:

#### **Public Member Functions**

void setScale (std::pair< ssize\_t, ssize\_t > scale) final override

Set the Scale of the window.

• void setScale (ssize\_t scale) final override

Set the Scale of the window.

void setSize (std::pair< ssize\_t, ssize\_t > size) final override

Set the Size of the window.

• std::pair< ssize\_t, ssize\_t > getScale (void) const final override

Get the Scale of the window.

• std::pair< ssize\_t, ssize\_t > getSize (void) const final override

Get the Size of the window.

• bool isKeyPressed (Arcade::Inputs) override

Check if a key is pressed.

· bool isKeyReleased (Arcade::Inputs) override

Check if a key is released.

#### **Protected Attributes**

- std::unordered\_map < Arcade::Inputs, bool > \_keys
   The map of all key pressed or not.
- std::string \_name

The name of the library.

## 5.2.1 Detailed Description

Abstract class for the graphical library.

#### 5.2.2 Member Function Documentation

#### 5.2.2.1 getScale()

Get the Scale of the window.

Returns

```
std::pair<ssize_t, ssize_t>
```

```
Implements Arcade::ILib.
25 { return _scale; }
```

#### 5.2.2.2 getSize()

Get the Size of the window.

Returns

```
std::pair<ssize_t, ssize_t>
```

Implements Arcade::ILib.
26 { return \_size; }

#### 5.2.2.3 isKeyPressed()

Check if a key is pressed.

**Parameters** 

input The key to check

#### Returns

true if the key is pressed, false otherwise

```
Implements Arcade::ILib.
28 { return false; }
```

#### 5.2.2.4 isKeyReleased()

Check if a key is released.

**Parameters** 

```
input The key to check
```

#### Returns

true if the key is released, false otherwise

```
Implements Arcade::ILib.
```

```
29 { return false; }
```

#### 5.2.2.5 setScale() [1/2]

Set the Scale of the window.

#### **Parameters**

```
scale The scale to set
```

#### Implements Arcade::ILib.

```
23 { _scale = std::pair<ssize_t, ssize_t>(scale, scale); }
```

#### 5.2.2.6 setScale() [2/2]

Set the Scale of the window.

#### **Parameters**

```
scale The scale to set
```

#### Implements Arcade::ILib.

```
22 { _scale = scale; }
```

#### 5.2.2.7 setSize()

Set the Size of the window.

#### **Parameters**

```
size The size to set
```

#### Implements Arcade::ILib.

```
24 { _size = size; }
```

The documentation for this class was generated from the following file:

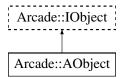

· core/src/Lib/ALib.hpp

# 5.3 Arcade::AObject Class Reference

Abstract class for every entities in games.

#include <AObjects.hpp>

Inheritance diagram for Arcade::AObject:

#### **Public Member Functions**

Arcade::Shapes getShape (void) const final override

Get the Shape object.

• std::pair< ssize\_t, ssize\_t > getPosition (void) const final override

Get the Position object.

std::pair< ssize\_t, ssize\_t > getSize (void) const final override

Get the Size object.

• Arcade::Colors getColor (void) const final override

Set the Color object.

• std::string getFilePath (void) const final override

Get the Texture object.

· void setShape (Arcade::Shapes shape) final override

Set the Shape object.

void setPosition (std::pair < ssize\_t, ssize\_t > position) final override

Set the Position object.

void setSize (std::pair< ssize\_t, ssize\_t > size) final override

Set the Size object.

void setColor (Arcade::Colors color) final override

Get the Color object.

· void setFilePath (std::string texture) final override

Set the Texture object.

#### **Protected Attributes**

Arcade::Shapes \_shape

The shape of the object.

std::pair< ssize\_t, ssize\_t > \_position

The position of the object.

std::pair< ssize\_t, ssize\_t > \_size

The size of the object.

Arcade::Colors \_color

The color of the object.

• std::string \_texture

The texture of the object.

## 5.3.1 Detailed Description

Abstract class for every entities in games.

#### 5.3.2 Member Function Documentation

#### 5.3.2.1 getColor()

```
Arcade::Colors Arcade::AObject::getColor (
            void ) const [inline], [final], [override], [virtual]
```

Set the Color object.

**Parameters** 

```
color
```

Implements Arcade::IObject.

```
24 {return _color;};
```

#### 5.3.2.2 getFilePath()

```
std::string Arcade::AObject::getFilePath (
            void ) const [inline], [final], [override], [virtual]
```

Get the Texture object.

Returns

std::string

Implements Arcade::IObject.
25 {return \_texture;};

### 5.3.2.3 getPosition()

```
std::pair< ssize_t, ssize_t > Arcade::AObject::getPosition (
            void ) const [inline], [final], [override], [virtual]
```

Get the Position object.

Returns

```
std::pair<ssize_t, ssize_t>
```

Implements Arcade::IObject.

```
22 {return _position;};
```

#### 5.3.2.4 getShape()

```
Arcade::Shapes Arcade::AObject::getShape (
             void ) const [inline], [final], [override], [virtual]
Get the Shape object.
Returns
     Arcade::Shapes
Implements Arcade::IObject.
21 {return _shape;};
5.3.2.5 getSize()
std::pair< ssize_t, ssize_t > Arcade::AObject::getSize (
             void ) const [inline], [final], [override], [virtual]
Get the Size object.
Returns
     std::pair<ssize_t, ssize_t>
Implements Arcade::IObject.
23 {return _size;};
5.3.2.6 setColor()
void Arcade::AObject::setColor (
             Arcade::Colors ) [inline], [final], [override], [virtual]
Get the Color object.
Returns
     Arcade::Colors
Implements Arcade::IObject.
30 {_color = color;};
5.3.2.7 setFilePath()
void Arcade::AObject::setFilePath (
```

std::string ) [inline], [final], [override], [virtual]

Set the Texture object.

Da			_ 1		
Pа	ra	m	eı	re	rs

texture

# Implements Arcade::IObject.

```
31 {_texture = texture;};
```

#### 5.3.2.8 setPosition()

```
void Arcade::AObject::setPosition (
            std::pair< ssize_t, ssize_t > ) [inline], [final], [override], [virtual]
```

Set the Position object.

#### **Parameters**

```
position
```

#### Implements Arcade::IObject.

```
28 {_position = position;};
```

#### 5.3.2.9 setShape()

```
void Arcade::AObject::setShape (
            Arcade::Shapes ) [inline], [final], [override], [virtual]
```

Set the Shape object.

#### **Parameters**

shape

# Implements Arcade::IObject. 27 {\_shape = shape;};

#### 5.3.2.10 setSize()

```
void Arcade::AObject::setSize (
            std::pair< ssize_t, ssize_t > ) [inline], [final], [override], [virtual]
```

Set the Size object.

#### **Parameters**

Implements Arcade::IObject.
29 {\_size = size;};

The documentation for this class was generated from the following file:

· core/src/Object/AObjects.hpp

## 5.4 Arcade::Core Class Reference

#### **Public Member Functions**

- Core (std::string libFilePath)
- void loop ()
- float getDeltaTime () const

#### 5.4.1 Constructor & Destructor Documentation

#### 5.4.1.1 Core()

```
Arcade::Core::Core (
                  std::string libFilePath )
11 {
12
             storeLibsPath();
13
              _lib.second = _lib.first.loadGraphicalLib(libFilePath);
        } catch (const LoaderException &e) {
             std::cerr « e.what() « std::endl;
17
              exit(84);
18
        _startTime = std::chrono::high_resolution_clock::now();
19
        _startIme = std::chrono::high_resolution_chock
_currentScene = Arcade::Scenes::MAIN_MENU;
for (size_t i = 0; i < _libsPath.size(); i++) {
    if (_libsPath[i] == libFilePath)
    _currentLib = i;
23
2.4
         _currentGame = 0;
25
        if (_libsPath.size() == 0 || _gamesPath.size() == 0) {
26
              std::cerr « "No library found" « std::endl;
28
              exit(84);
29
        _lib.second.get()->createWindow(); initMenu();
30
31
32 }
```

#### 5.4.1.2 ∼Core()

```
Arcade::Core::~Core ( )
35 {
36    __lib.first.closeLib();
37.1
```

#### 5.4.2 Member Function Documentation

#### 5.4.2.1 getDeltaTime()

```
float Arcade::Core::getDeltaTime ( ) const [inline]
40 { return _deltaTime; };
```

#### 5.4.2.2 loop()

```
void Arcade::Core::loop ( )
164 {
165     while (_currentScene != Arcade::Scenes::LEAVE) {
166          _lib.second.get()->updateEvent();
167          updateDeltaTime();
168          wait(0.01);
169          _lib.second->clearWindow();
170          runScene(_currentScene);
171          _lib.second->renderWindow();
172     }
173 }
```

The documentation for this class was generated from the following files:

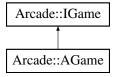

- · core/Core.hpp
- · core/Core.cpp

# 5.5 Arcade::IGame Class Reference

Interface for one game library.

```
#include <IGame.hpp>
```

Inheritance diagram for Arcade::IGame:

#### **Public Member Functions**

• IGame (void)=default

Construct a new IGame object.

virtual ∼IGame ()=default

Destroy the IGame object.

virtual void load (void)=0

Load the game.

• virtual void update (Arcade::ILib &lib, float seconds)=0

Update the game.

• virtual void render (Arcade::ILib &lib)=0

Render the game.

• virtual void reset (void)=0

Reset the game.

virtual void unload (void)=0

Unload the game.

virtual Arcade::gameState getState (void) const =0

Get the game state.

• virtual ssize\_t getScore (void) const =0

Get the game score.

virtual ssize\_t getHighScore (void) const =0

Get the game high score.

• virtual std::string getGameName (void) const =0

Get the game name.

#### 5.5.1 Detailed Description

Interface for one game library.

#### 5.5.2 Member Function Documentation

## 5.5.2.1 getGameName()

Get the game name.

This function will return the name of the game.

Returns

The name of the game.

Implemented in Arcade::AGame.

#### 5.5.2.2 getHighScore()

Get the game high score.

This function will return the current high score of the game.

Returns

The current high score of the game.

Implemented in Arcade::AGame.

#### 5.5.2.3 getScore()

Get the game score.

This function will return the current score of the game.

Returns

The current score of the game.

Implemented in Arcade::AGame.

#### 5.5.2.4 getState()

Get the game state.

This function will return the current state of the game.

Returns

The current state of the game.

Implemented in Arcade::AGame.

#### 5.5.2.5 load()

Load the game.

This function can load all the assets needed for the game or entities that will be used in the game.

## 5.5.2.6 render()

Render the game.

This function will be called every frame and will render entities with grahical library.

#### **Parameters**

lib graphical library, used to render entities.

#### 5.5.2.7 reset()

Reset the game.

This function will be called when the game is reset. It should reset all the entities to their initial state.

#### 5.5.2.8 unload()

Unload the game.

This function will be called when the game is unloaded. It should unload all the assets and entities.

#### 5.5.2.9 update()

Update the game.

This function will be called every frame and will update the game.

#### Parameters

lib	graphical library, used to get inputs.
seconds	time elapsed since the last frame.

The documentation for this class was generated from the following file:

· core/src/Game/IGame.hpp

## 5.6 Arcade::ILib Class Reference

Interface for the graphical library.

#include <ILib.hpp>

Inheritance diagram for Arcade::ILib:

#### **Public Member Functions**

· ILib (void)=default

Construct a new ILib object.

∼ILib ()=default

Destroy the ILib object.

• virtual bool isKeyPressed (Arcade::Inputs input)=0

Check if a key is pressed.

• virtual bool isKeyReleased (Arcade::Inputs input)=0

Check if a key is released.

virtual bool isWindowClosed (void)=0

Check if the window is closed.

virtual void updateEvent (void)=0

Update all entities in the window.

• virtual void createWindow (void)=0

Create the window and open it.

• virtual void closeWindow (void)=0

Close the window.

• virtual void clearWindow (void)=0

Clear all entities in the window.

virtual void renderWindow (void)=0

Display all entities in the window.

virtual void drawObjets (std::shared\_ptr< Arcade::IObject > object)=0

Draw an IObject in the window.

 virtual void drawShapes (Arcade::Shapes shape, Arcade::Colors color, std::pair< ssize\_t, ssize\_t > pos, std::pair< ssize\_t, ssize\_t > size)=0

Draw a shape in the window with a color, a position and a size.

virtual void drawText (std::shared\_ptr< Arcade::Text > text)=0

Draw a text in the window.

 $\bullet \ \ \text{virtual void } \ \ \text{drawText } (\text{std}:: \text{string str}, \ \ \text{Arcade}:: \ \ \text{Colors color, } \ \ \text{ssize\_t size, } \ \ \text{std}:: \ \ \text{pair} < \ \ \text{ssize\_t}, \ \ \text{ssize\_t} > \ \ \text{pos}) = 0 \\$ 

Draw a text in the window.

virtual void setScale (std::pair< ssize\_t, ssize\_t > scale)=0

Set the Scale of the window.

virtual void setScale (ssize\_t scale)=0

Set the Scale of the window.

virtual void setSize (std::pair< ssize t, ssize t > size)=0

Set the Size of the window.

virtual std::pair< ssize\_t, ssize\_t > getScale (void) const =0

Get the Scale of the window.

virtual std::pair< ssize\_t, ssize\_t > getSize (void) const =0

Get the Size of the window.

# 5.6.1 Detailed Description

Interface for the graphical library.

#### 5.6.2 Member Function Documentation

#### 5.6.2.1 drawObjets()

Draw an IObject in the window.

#### **Parameters**

pject The object to draw	object
--------------------------	--------

#### 5.6.2.2 drawShapes()

Draw a shape in the window with a color, a position and a size.

#### **Parameters**

shape	The shape to draw
color	The color of the shape
pos	The position of the shape
size	The size of the shape

### 5.6.2.3 drawText() [1/2]

Draw a text in the window.

#### **Parameters**

text   The text to o
----------------------

#### 5.6.2.4 drawText() [2/2]

Draw a text in the window.

#### **Parameters**

str	The text to draw
color	The color of the text
size	The size of the text
pos	The position of the text

#### 5.6.2.5 getScale()

Get the Scale of the window.

#### Returns

```
std::pair{<} ssize\_t, \, ssize\_t{>}
```

Implemented in Arcade::ALib.

#### 5.6.2.6 getSize()

Get the Size of the window.

#### Returns

```
std::pair<ssize_t, ssize_t>
```

Implemented in Arcade::ALib.

#### 5.6.2.7 isKeyPressed()

Check if a key is pressed.

#### **Parameters**

```
input The key to check
```

#### Returns

true if the key is pressed, false otherwise

Implemented in Arcade::ALib.

#### 5.6.2.8 isKeyReleased()

Check if a key is released.

#### **Parameters**

```
input The key to check
```

#### Returns

true if the key is released, false otherwise

Implemented in Arcade::ALib.

### 5.6.2.9 isWindowClosed()

Check if the window is closed.

#### Returns

true if the window is closed, false otherwise

#### 5.6.2.10 setScale() [1/2]

Set the Scale of the window.

**Parameters** 

```
scale The scale to set
```

Implemented in Arcade::ALib.

#### 5.6.2.11 setScale() [2/2]

Set the Scale of the window.

#### **Parameters**

The scale to set	scale
------------------	-------

Implemented in Arcade::ALib.

#### 5.6.2.12 setSize()

Set the Size of the window.

#### **Parameters**

```
size The size to set
```

Implemented in Arcade::ALib.

The documentation for this class was generated from the following file:

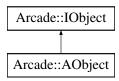

• core/src/Lib/ILib.hpp

# 5.7 Arcade::IObject Class Reference

Interface for the object.

```
#include <IObject.hpp>
```

Inheritance diagram for Arcade::IObject:

#### **Public Member Functions**

• IObject (void)=default

Construct a new lObject object.

virtual ~IObject ()=default

Destroy the IObject object.

virtual Arcade::Shapes getShape (void) const =0

Get the Shape object.

virtual void setShape (Arcade::Shapes)=0

Set the Shape object.

virtual std::pair< ssize\_t, ssize\_t > getPosition (void) const =0

Get the Position object.

virtual void setPosition (std::pair< ssize\_t, ssize\_t >)=0

Set the Position object.

virtual std::pair< ssize\_t, ssize\_t > getSize (void) const =0

Get the Size object.

virtual void setSize (std::pair< ssize\_t, ssize\_t >)=0

Set the Size object.

virtual void setColor (Arcade::Colors)=0

Get the Color object.

• virtual Arcade::Colors getColor (void) const =0

Set the Color object.

• virtual std::string getFilePath (void) const =0

Get the Texture object.

• virtual void setFilePath (std::string)=0

Set the Texture object.

#### 5.7.1 Detailed Description

Interface for the object.

The methods are pure virtual and must be overriden in the inherited classes

#### 5.7.2 Constructor & Destructor Documentation

#### 5.7.2.1 IObject()

Construct a new lObject object.

It is used to draw something with graphical library

#### 5.7.3 Member Function Documentation

#### 5.7.3.1 getColor()

Set the Color object.

**Parameters** 

color

Implemented in Arcade::AObject.

#### 5.7.3.2 getFilePath()

Get the Texture object.

Returns

std::string

Implemented in Arcade::AObject.

```
5.7.3.3 getPosition()
```

std::pair<ssize\_t, ssize\_t>

Implemented in Arcade::AObject.

#### 5.7.3.4 getShape()

Get the Shape object.

Returns

Arcade::Shapes

Implemented in Arcade::AObject.

#### 5.7.3.5 getSize()

Get the Size object.

Returns

std::pair<ssize\_t, ssize\_t>

Implemented in Arcade::AObject.

#### 5.7.3.6 setColor()

Get the Color object.

Returns

Arcade::Colors

Implemented in Arcade::AObject.

#### 5.7.3.7 setFilePath()

Set the Texture object.

D-				
Pa	rai	me	ıе	rs

Implemented in Arcade::AObject.

### 5.7.3.8 setPosition()

Set the Position object.

#### **Parameters**

Implemented in Arcade::AObject.

#### 5.7.3.9 setShape()

Set the Shape object.

#### **Parameters**

Implemented in Arcade::AObject.

#### 5.7.3.10 setSize()

Set the Size object.

#### **Parameters**

size

Implemented in Arcade::AObject.

5.5
```

#### 5.8.2.4 loadGraphicalLib()

Loads a library.

#### **Parameters**

```
libPath The name of the library to load
```

Returns

A shared pointer to the library

The library must be in the ./lib folder

```
_handle = dlopen(libPath.c_str(), RTLD_LAZY);

LibInterface *(*builder)() = nullptr;

if (!_handle)

throw LoaderException(dlerror());

builder = reinterpret_cast<LibInterface *(*)()>(dlsym(_handle, "DisplayEntryPoint"));

if (!builder)

throw LoaderException(dlerror());

return std::shared_ptr<LibInterface>(builder());

}
```

36 Class Documentation

# 5.9 Arcade::LoaderException Class Reference

The class LoaderException is the exception thrown when the library cannot be loaded.

```
#include <ErrorManagement.hpp>
```

Inheritance diagram for Arcade::LoaderException:

#### **Public Member Functions**

- LoaderException (const std::string &message)
- const char \* what () const throw ()

#### 5.9.1 Detailed Description

The class LoaderException is the exception thrown when the library cannot be loaded.

#### **Parameters**

message The message to display

#### 5.9.2 Constructor & Destructor Documentation

#### 5.9.2.1 LoaderException()

#### 5.9.2.2 ∼LoaderException()

```
\label{local_energy}  \mbox{Arcade::LoaderException::$\sim$LoaderException ( ) throw ( ) [inline] $21 ${}_{\{}_{\}}$ }
```

#### 5.9.3 Member Function Documentation

#### 5.9.3.1 what()

```
const char * Arcade::LoaderException::what ( ) const throw ( ) [inline]
22 { return _message.c_str(); }
```

The documentation for this class was generated from the following file:

· core/ErrorManagement.hpp

#### 5.10 Arcade::Text Class Reference

The class Text is the generic way to handle text.

```
#include <Text.hpp>
```

#### **Public Member Functions**

• Text (void)

Construct a new Text object.

Text (std::string text, std::pair< ssize\_t, ssize\_t > pos, Arcade::Colors color)

Construct a new Text object.

~Text ()=default

Destroy the Text object.

• std::string getText (void) const

Get the Text object.

void setText (std::string)

Set the Text object.

std::pair< ssize\_t, ssize\_t > getPosition (void) const

Get the Position object.

void setPosition (std::pair< ssize\_t, ssize\_t >)

Set the Position object.

void setColor (Arcade::Colors)

Get the Color object.

Arcade::Colors getColor (void) const

Set the Color object.

#### 5.10.1 Detailed Description

The class Text is the generic way to handle text.

38 Class Documentation

#### 5.10.2 Constructor & Destructor Documentation

#### 5.10.2.1 Text() [1/2]

Construct a new Text object.

The default constructor of the class Text

Must be implemented in the inherited classes

## 5.10.2.2 Text() [2/2]

Construct a new Text object.

The constructor of the class Text

Must be implemented in the inherited classes

### Parameters

text	The text to display
pos	The position of the text
color	The color of the text

#### 5.10.3 Member Function Documentation

#### 5.10.3.1 getColor()

Set the Color object.

#### **Parameters**

color	

```
77 { return _color; };
5.10.3.2 getPosition()
std::pair< ssize_t, ssize_t > Arcade::Text::getPosition (
             void ) const [inline]
Get the Position object.
Returns
     std::pair<ssize_t, ssize_t>
59 { return _position; };
5.10.3.3 getText()
std::string Arcade::Text::getText (
             void ) const [inline]
Get the Text object.
Returns
     std::string
47 { return _text;};
5.10.3.4 setColor()
void Arcade::Text::setColor (
             Arcade::Colors ) [inline]
Get the Color object.
Returns
     Arcade::Colors
71 { _color = _color; };
```

#### 5.10.3.5 setPosition()

```
void Arcade::Text::setPosition (
            std::pair< ssize_t, ssize_t > ) [inline]
```

Set the Position object.

40 Class Documentation

#### **Parameters**

```
position
65 { _position = _position; };
```

#### 5.10.3.6 setText()

Set the Text object.

#### **Parameters**
